

AI Phase 2 Could Potentially Unlock a 70X Growth Opportunity

Missed the First AI Boom? Hopefully There's A Second Chance

500,000 new millionaires — made in just one year, all thanks to AI...

Were you one of them?

If not, the next question is: Will you be ready when **Phase 2** of the AI gold rush begins?

While everyone's been fixated on the obvious winners (*cough* Nvidia *cough*), others have been not-so-quietly selling them off, while shifting their focus elsewhere...

One billion-dollar fund manager calculates that **Phase 2 AI stocks could offer as much as 10x MORE upside potential** than Phase 1 stocks like Nvidia

Satya Nadella, CEO of Microsoft, isn't mincing words:

"This next generation of AI will reshape every software category and every business, including our own."

And here's why this is critical right now:

New data reveals that the majority of U.S. companies are getting ready to flip the Phase 2 "on" switch as we speak. AI is already the fastest-adopted technology. OpenAI alone receives 800M active users every week! But once this switch gets flipped, Phase 2 could potentially begin rapidly unlocking a multi-trillion dollar opportunity!

Sound too good to be true?

That's what I thought too... until I dug deeper and realized this pattern has repeated itself consistently throughout history.

You can look back to the Industrial Revolution, the rise of the internet, or the dawn of the smartphone era...

In every case, Phase 1 was about building the foundation.

But it's in Phase 2 where the real profits have always been made.

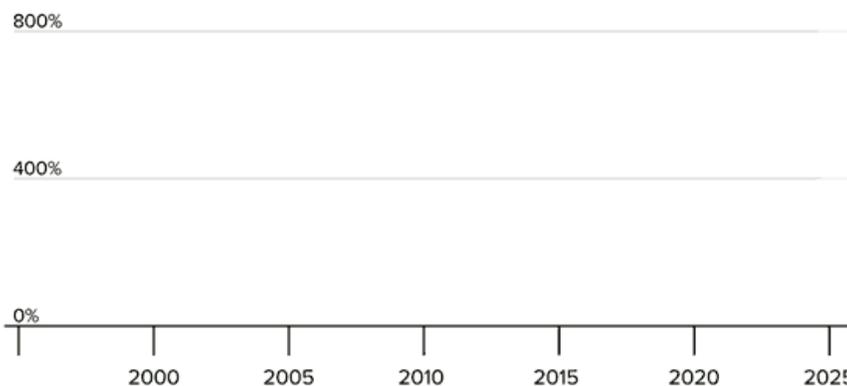

Take the internet era, for example. During its first phase, hardware companies like Cisco and HP soared as they built the physical infrastructure. But the *true* wealth? It was created in the second phase by software giants like Amazon and Netflix, who used that infrastructure to build platforms and services that changed the world.

And guess what? We spotted these Phase 2 opportunities early. We recommended Netflix in November of 2004 (**now up 51,300%**), and Amazon as far back as 1997, and again in August of 2002 (**now up 27,029%**).

When you compare the performance of these Phase 2 stocks to the hardware giants, it's not even close.

PERFORMANCE OF PHASE 1 VS PHASE 2 INTERNET STOCKS

Phase 2 stocks outperformed hardware stocks by as much as 8,000 times!

Data as of 7/26/2024

Phase 2 stocks have outperformed those hardware stocks by as much as 8,000 times!

Now, let's focus on today. As of last year, the AI market was worth 'only' \$200 billion. But some experts estimate that this "next frontier of artificial intelligence" could unlock a **\$14 trillion opportunity by 2030.**

That's a 70X second-chance potential opportunity... and we may not get another one like it again.

JP Morgan recently coined the term "AI 2.0" to describe the next wave of opportunities in AI, stating,

"Most of the unrecognized value in AI is in areas such as software and applications."

This signals a major shift in where the real potential lies.

Which is why we're here today to alert you to this opportunity. We're NOT here to pitch more phase 1 AI stocks. That ship has partially sailed and made many very, very wealthy. And while many of those stocks are likely to still do well, we think smart investors should add these Phase 2 stocks to their investments sooner than later.

But Phase 2... well, that has hardly started.

In fact, we've created a report of 3 stocks we think will greatly benefit from Phase 2.

Some of these stocks could truly be the **next Nvidia**. The largest stock in this report is 23X smaller than Microsoft, while the smallest stock is 266X smaller than Nvidia right now.

That's a lot of opportunity for growth.

Listen — you may have missed the boat on that first wave for Nvidia... maybe even Phase 1 altogether... but you don't have to potentially make the same mistake twice.

Which is why we're giving this report away as a complementary bonus to all members of our flagship service, *Stock Advisor*.

And to sweeten the deal for you right now, so you don't miss this opportunity, we're also slashing 50% off your membership fee today*.

The AI gold rush isn't over; it's just entering what experts believe will be its most lucrative phase. Don't be the one who looks back in regret, wishing you had taken action when the opportunity was right in front of you.

Click below to learn how to secure your spot and get instant access to the report.

Remember, the biggest opportunities in AI are still ahead of us. Don't let them pass you by.
